LifeData Vima Powered Dashboards

From an embedded copilot to an AI-powered analytics workspace

Empowering Vima. Extending Superset.
Building dashboards people can use.

PROBLEM
The starting limits

SOLUTION
The engineering work

RESULT
The experience today

Vima was attached — and constrained

The original architecture limited the analyst and builder we wanted.

AN EMBEDDED CHAT PANEL

Vima was injected into Superset; it was not a native Superset extension.

ITS OWN LIMITED TOOL LOOP

Custom REST tools handled requests; native Superset MCP was not enabled.

CAPABILITY BLOCKS

Copilot rules blocked datasets, maps and styling that users asked for.

A TECHNICAL DASHBOARD WORKFLOW

Native layouts, chart setup and geographic filters needed manual work.

MISSING SUPPORTING SERVICES

Staging lacked dedicated workers and screenshot infrastructure.

LIMITED ROOM TO GROW

Custom visuals, multi-step analysis and reusable skills needed new support.

THE GOAL / A capable analyst and builder with access to Superset’s capabilities.

We changed the integration, platform and experience

Six connected areas of work — from native capability access to the published workspace.

1 SUPERSET TOOL ACCESS

Enable native MCP, user identity, tool discovery and missing API wrappers.

2 FEWER WRAPPER LIMITS

Broaden chart/data access and styling; later remove the fixed semantics registry.

3 ANALYSIS + REUSE

Query exploration, canvas visuals, analyst jobs, repair tools and approved skills.

4 PLATFORM RELIABILITY

Workers, scheduling, cache and screenshots; repair query and service failures.

5 CUSTOM DASHBOARD VIEWS

Publish live workspaces with shared filters, maps, tabs and reusable design.

6 PRACTICAL WORKFLOWS

Saved edits, chart-level styling, file inputs, provider adapters and validation.

THE SHIFT / Broader AI capability, stronger platform support and a reusable dashboard interface.

A connected analyst-and-dashboard workflow

Superset powers the data. Vima discovers, builds, publishes and refines.

BROADER AI CAPABILITY

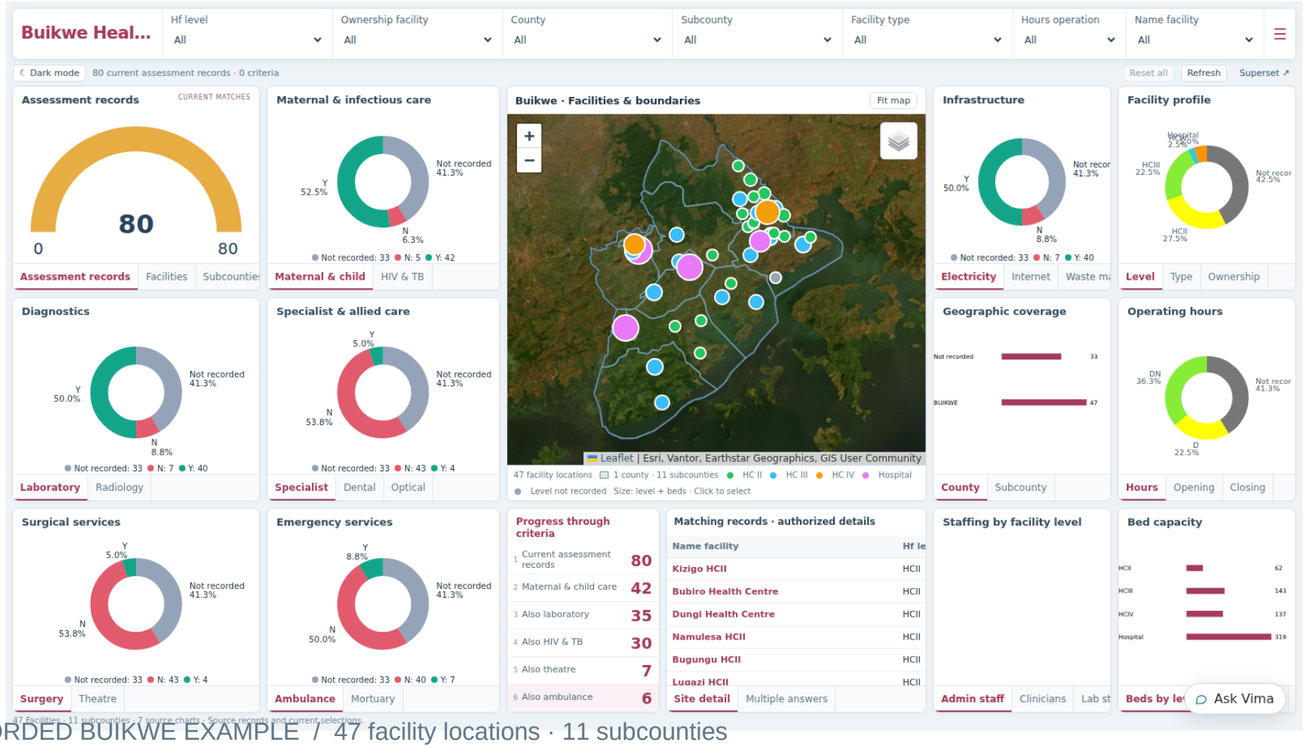

Vima can use Superset tools, build visuals and reuse approved workflows.

A USABLE STAKEHOLDER VIEW

Live charts, maps and shared selections in a reusable custom workspace.

A RESULT WE CAN SHOW

Buikwe: filter an area, inspect a facility and save a Vima chart edit.

RECORDED BUIKWE EXAMPLE / 47 facility locations · 11 subcounties

LIVE DEMO / Choose an area → Explore a facility → Ask Vima to save a chart change
